Program(s) Assessed

Interactive Multimedia (IMMA)

Learning Goal/Outcome

Demonstrate collaborative skills in an interdisciplinary group, contributing appropriate expertise in chosen role.

Question

Are students developing collaborative skills over the course of their experience with our projects sequence?

Expected Answer (hypothesis)

Yes, but we don't think we're doing it as well as we think we could.

How information will be used by the program

We will use these results to consider revision of our 'projects' sequence, in particular to address questions of faculty participation in the sequence (e.g. the way the courses are scheduled and how faculty load is distributed).

Plan (methods)

Take sample projects from Design and the three projects courses and evaluate them using a revised version of the methodology developed last year.
