

TITLE: Computer Science Test  
PROGRAMMER NAME: Greg Beckley

**Overview:**

This test is supposed to test a student on their knowledge of computer science. It uses buttons and calculates your grade.

**Complexity:**

This project involves the following techniques:

- Buttons
- Calculating score
- Submitting answers

**Interest:** This will interest people who like computer science and want to test what they know about it.

**Remix:** There are a lot of tests out there I personally used a template of a personality quiz I found online that is referenced in the project.

**Anticipated Problems:** I anticipate that I will have a hard time calculating the grades.

**Implementation Goals:**

Thursday: Work on the questions

Saturday: Make the buttons

Sunday: work on submitting answers

Monday: work on making a score

Tuesday: Ready for testing!

**Techniques Yet to Learn:**

- Submitting answers
- Making a score
- Making the buttons

**Debugging Buddy:** Brian Michalowski
