HES 099/Emergency Care 0 course unit (every semester)
Basic safety and emergency first-aid knowledge and skills with opportunity to attain American Red Cross CPR and first-aid certification.

HES 160/Current Health and Wellness Issues 1 course unit (every semester)
This course is designed so that students learn to explore wellness as an active choice based on understanding of the science of health/wellness and the statistical study of risk factors for mortality and morbidity. Students will develop this understanding through an investigation of lifestyle issues facing college students. They will learn how to assess their lifestyles, interpret indicators and trends, and evaluate choices using comprehensive health assessments.

HES 172/Foundations of Health and Exercise Science 1 course unit (every semester)
This course is designed to introduce students to the critical issues in physical education, fitness, sports, and health promotion. Changing philosophies and basic concepts will be discussed. Professions related to physical education, sports, fitness, and health wellness will be included.

HES 180/Motor Development and Elementary Movement 1 course unit (fall)
Prerequisite: Reserved for Health and Exercise science pre-majors and teacher candidates
Study of the concept and underlying principles of movement; application of these principles to early childhood movement, sports and dance.

HES 182/Lifespan Wellness Activities 1 course unit (spring)
The course will present introductory skills, knowledge, teaching methodology, evaluative techniques, and resources related to conducting at least three individual and dual sports activities. Primary emphasis is on knowledge of the skills and methodology. (Suggested sports: golf, tennis, badminton, and racquetball.)

HES 203/Anatomy and Physiology I 1 course unit (with laboratory) (every semester)
Prerequisite: BIO 171
This course is designed to prepare students on the basic scientific principles of Anatomy and Physiology. A systematic study of homeostasis involving all structure and function of the human body. Course topics will include biological terminology, from the cellular level through the fundamental Systems of the Body. Growth and development of the body's framework, movements, homeostatic balance for health and wellness will be emphasized. Laboratory experiences and dissections are included.

HES 204/Anatomy and Kinesiology 1 course unit (every semester)
Prerequisite: HES 203
A second year course for both physical education and exercise science students prepares the student to understand the science of motion. This course provides students with a foundation in neuromuscular physiology, anatomy, and biomechanics that is essential for the understanding of bodily movements and athletic performance.

HES 205/Applied Anatomy and Physiology II 1 course unit (with laboratory) (spring)
Prerequisites: BIO 171, HES 203
This course is designed to prepare students on the basic scientific principles of Human Anatomy and Physiology. A comprehensive systematic study of "balance" involving all structures and function in the human body will be performed. Course topics will begin with basic anatomical terminology, from the human skeleton system, to the nervous system, muscle tissue, and the muscle system including the
"Sliding Filament Theory" of muscular contraction. Growth and development, aging and rehabilitation will be emphasized. Laboratory experiences and dissections are included.

**HES 282/Sport Concepts and Skills**  
1 course unit  
(fall)  
*Prerequisite:* Reserved for Health and Exercise Science pre-majors and teacher candidates  
The course will present introductory skills, knowledge, teaching methodology, evaluative techniques, and resources related to conducting at least three team sports activities. Primary emphasis is on knowledge of the skills and methodology.

**HES 292/Methods of Elementary Health and Physical Education**  
1 course unit  
(with laboratory)  
(spring)  
*Prerequisite:* HES 180  
Introduction of methodologies specific to elementary health and physical education. A K-5 field experience consisting of observation, co-teaching, and teaching health and physical education are required. Primary emphasis on successful lesson planning, lesson implementation, management techniques, student learning and personal reflection.

**HES 301: Sports Biomechanics**  
1 course unit  
*Prerequisites:* HES 203 and 205  
(fall)  
A junior-level course for Exercise Science students. This course prepares students for a career in a fitness-related field. This course provides students with a foundation in kinesiology, exercise technique, kinetics, and kinematics that is essential for understanding the basic principles of human movement. This course is exempt for students that take HES 204, but a requirement if the student takes HES 205.

**HES 302/Assessment and Evaluation of Human Performance**  
1 course unit  
(with laboratory)  
(every semester)  
An upper level course for students studying exercise science. This course is designed to provide the student with a knowledge base in descriptive and inferential statistics and a thorough understanding of both laboratory and field evaluation of various components of fitness. Students also learn to work as writing teams in development of lab reports. This course serves as one of the intensive writing courses for the department.

**HES 303/Assessment and Evaluation in Health & Physical Education**  
1 course unit  
(with laboratory)  
(spring)  
An upper-level course for students studying teaching in health and physical education. This course will provide basic theoretical and practical experience in understanding evaluation procedures and assessment protocols common to health and physical education. Specific course topics will include traditional testing vs. authentic assessment, normative vs. criterion tests, domain specific assessment, test administration, assessment software. In addition, assessment tools will be located/created and utilized to evaluate student performance.

**HES 304/Adapted Kinetics**  
1 course unit  
(fall)  
*Prerequisites:* Reserved for Health and Exercise Science teacher candidates  
During the semester, the student will survey and investigate physical education as related to exceptional children. Emphasis will be focused on (a) defining and identifying specific categories of exceptional children; (b) developing instruction through the child-centered approach; (c) examining current trends and practices in adapted physical education; and (d) understanding theories, motor activity regimes, and physical activities geared toward an understanding of the exceptional child's needs and interest.
HES 307/Principles and Problems of Coaching  
(spring)  
1 course unit  
Focuses on the principles and problems of coaching that are applicable across all sports. Prepares students to critically evaluate and assess the issues and problems that confront coaches who work with athletes of all ages and abilities.

HES 311/Applied Physiology  
(every semester)  
1 course unit  
Prerequisites: HES 203  
This course provides students with scientific information pertinent to the physiological and biochemical responses and adaptations of human body to physical stress and how regular physical activity may help augment human function and prevent hypokinetic-related diseases. Students will also be exposed to the research process pertaining to this subject matter and be prompted to use what they learn for problem solving.

HES 350/Nutrition and Metabolism  
(every semester)  
1 course unit  
Prerequisites: HES 203  
This course provides students with basic concepts and principles pertaining to nutrition and energy metabolism as well as various quantitative methods used in nutritional analysis. It focuses on most current and research-based information pertaining to the positive influence of proper nutrition on health, fitness, and sports performance and hands-on experiences for evaluating dietary status and energy balance.

HES 351/Stress Management  
(every semester)  
1 course unit  
Designed to help individuals relax, energize, and cope through learning strategies for desensitization to stressful situations, enhancement of self-image, and development of scientific relaxation techniques. A small additional fee may be required.

HES 353/Analysis of Drug Dependencies  
(spring)  
1 course unit  
Analysis of drug dependencies and their effect on the individual and society. The use, misuse, and abuse of mood-modifying substances including tobacco, alcohol, and other drugs, both therapeutic and illicit. Implications for instruction in the public schools.

HES 356/Foundations of Sex Education  
(fall)  
1 course unit  
Analysis of human sexuality, including human sexual response, value clarification, contraception, abortion, reproduction, social mores, homosexuality, sex research, and sex education. Curriculum design and implementation.

HES 370/300-Level Selected Topics in Health  
(occasionally)  
1 course unit  
In-depth study and/or field experience in current or specialized topics proposed by the faculty and approved by the department. The course may be repeated each time the content changes.
HES 371/Outdoor Education (every semester) 1 course unit
Prerequisite: Reserved for Health and Exercise Science teacher candidates
Introduction to the development of outdoor recreation and school camping. Theories, practices, educational significance, organization, administration, and basic program concepts. Field trips may be required at student expense.

HES 372/Care and Prevention of Athletic Injuries (with laboratory) 1 course unit
(spring, every other year)
Prerequisites: HES 203, 204
Principles, organization, and administration of training room facilities. Preventive and remedial athletic bandaging, analysis of common injuries, first-aid and rehabilitation procedures, athletic training techniques.

HES 390/Methods of Secondary Health and Physical Education (with laboratory) 1 course unit
(fall)
Prerequisite: Reserved for Health and Exercise Science pre-majors and teacher candidates. HES 292, minimum GPA of 2.5
Advanced methodologies specific to secondary health and physical education. A secondary (grades 6-12) field experience consisting of observation, co-teaching, and teaching health and physical education are required. Primary emphasis on successful lesson planning with regard to the NASPE and NJCCC standards, lesson implementation, management techniques, student learning and personal reflection.

HES 391/Independent Study in Health and Exercise Science variable course units
(every semester)
Prerequisite: Approval of topic by department
For advanced student; in-depth study of a carefully defined area of health, exercise science, or physical education.

HES 405/Exercise Guidelines for Allied Health Professionals 1 course unit
(every semester)
Prerequisite: HES 311
This course is designed to provide students with an advanced understanding of functional changes in the human body throughout the lifespan as well as pathological process underlying various chronic diseases. Students will be given the opportunity to develop safe and appropriate exercise programs for special populations including children, elderly, and pregnant women as well as those with cardiorespiratory, metabolic, musculoskeletal, and neuromuscular conditions.

HES 410/Exercise Physiology and Exercise Prescription 1 course unit
(every semester)
Prerequisite: HES 311
This course is designed to provide an in-depth discussion on adaptations of various physiological systems to exercise training. Additional emphasis will be placed on the effects of environmental factors on physiological systems and performance, nutritional concerns, and ergogenic aids. Practical applications are provided to enable students to develop exercise prescriptions for a host of competitive and recreational athletic populations.

HES 450/Physiology of Resistance Training 1 course unit
(every semester)
Prerequisites: HES 203, HES 204, HES 311
This senior-level course prepares students for a career in a strength and conditioning-related field by providing students with a foundation in neuromuscular physiology, exercise biomechanics, acute responses and chronic adaptations to resistance training, and advanced program design and training periodization.

<td>1</td>
<td>(occasionally) In-depth study and/or field experience in current or specialized topics proposed by the faculty and approved by the department. The course may be repeated each time the content changes.</td>
</tr>
<tr>
<td>HES 490</td>
<td>Student Teaching</td>
<td>2</td>
<td>(every semester) Prerequisite: Meeting of all criteria for admission to student teaching Corequisite: HES 498. Full semester of student teaching during the senior year with approved teachers in selected schools of the state. Direct supervision by teachers and college supervisors. Observation, participation, and responsible teaching. 2.75 grade point average is required.</td>
</tr>
<tr>
<td>HES 493</td>
<td>Internship</td>
<td>2</td>
<td>(every semester) Emphasis upon practical experience, research, observation, participation, organization, administration, and supervision in programs of fitness, wellness, cardiopulmonary rehabilitation, physical therapy, occupational therapy, sports conditioning, or other health-related programs. Students are required to complete 450 hours at an approved center or clinic. This course is for seniors in good standing who have completed all coursework as outlined in the HES course of study.</td>
</tr>
<tr>
<td>HES 497</td>
<td>Research Seminar in Health and Exercise Science</td>
<td>1</td>
<td>(spring) Prerequisites: HES 410 This course is designed to provide an in-depth discussion on a broad range of topic areas including sports nutrition and supplementation, pharmacological interventions in sport, environmental physiology, hydration issues, endocrine factors, and overtraining. In addition, the course will have the flexibility to focus on other relevant topic areas that may arise in the field.</td>
</tr>
<tr>
<td>HES 498</td>
<td>Seminar in Health and Physical Education</td>
<td>1</td>
<td>(every semester) (capstone) Prerequisites: 2.75 GPA; concurrent enrollment in HES 490. Program organization and administration in health and physical education. Legal foundations, personnel functions, budget and finance, facilities and equipment, public relations, and professional organizations discussed.</td>
